

# Zoning to control infectious diseases in Peruvian aquaculture

---

Peru has great potential for aquaculture development for various species. However, the number of Peruvian exports is limited due to the presence of certain diseases.

Through this PPG, a feasibility analysis study was developed to assess the potential impact and technical and economic feasibility of implementing international standards – detailed in the WOA and FAO manuals – on zoning as a tool to control infectious diseases in white shrimp in Piura and Tumbes.

The cost-benefit analysis determined that maintenance of the zoning for Peruvian shrimp is feasible and profitable. A roadmap is being prepared for the implementation of zoning in the country.

## **STDF/PPG/767**

### **Status**

Completed

### **Start Date**

15/06/2021

### **Project Value (US\$)**

\$36,082

### **STDF Contribution (US\$)**

\$36,082

### **Beneficiaries**

Peru
