

Piloting a vTPA programme in East Africa to improve food safety in horticulture and fisheries

This project pilots the use of a Voluntary Third-Party Assurance (vTPA) Programme in Rwanda (horticulture) and Uganda (fisheries) to improve food safety, based on the Codex Principles and Guidelines for the Assessment and Use of Voluntary Third-Party Assurance Programmes (CXG 93-2021). The pilot would complement two other ongoing pilot projects, generating additional data and evidence on the use of the vTPA approach in developing countries, and promoting dialogue and learning across [West Africa](#) and [Central America](#). The project will also assess and make use of data and information from vTPA Programmes to support ongoing food safety reform processes, including the move towards a more risk-based inspection system that will further strengthen dialogue and cooperation with small-scale producers and food business operators, as part of efforts to modernize and strengthen food safety management.
